ABSTRACT

Background: The nasal tip is an important aesthetic feature of the face and its surgery is one of the most exciting and challenging part of a rhinoplasty. The aim of this study was to analyze the effect of cutting the depressor septi nasi muscle on nasal tip projection and rotation.

Methods: The present quasi clinical trial was conducted from June 2009 to June 2010 in Imam Reza hospital of Tabriz. Forty primary rhinoplasty patients who required nasal tip modification were underw...
